

# Profiles

Purpose: Reusable, named execution templates for any adapter. Profiles can contain placeholders like `${OrderId}` and declare `ProfileQueryParameters` with default/mandatory flags. At runtime, placeholders are replaced from query or header values.

Execution: `GET /api/v1/executeProfile?profile=<ProfileKey>` with `x-api-key` (header or query). Parameters can be passed as `?OrderId=123` or via headers.
